### Please Note

- If you experience any dryness effect during the day, it's highly recommended to renew the application of the **CREMAZUR CREAM** in order to sooth your skin during the treatment.
- Please pay attention for the sensitive area around the mouth when applying the night creams and especially the activator concentrate solution by isolating the outer corner and using a lips ointment.
- During the treatment, we insist on the importance to avoid any direct application of perfumes on the face and neck area. It will cause local irritations because it contains a high percentage of alcohol in its formulas.

➤ **The presence of the activator solution in your treatment regimen has some particularities in its application:**

- Focus well on the areas of impurities by swabbing it with a cotton pad but without exaggerating in quantities.
- Try to minimize the use on the sensitive areas like around the nose and mouth since it reacts quickly and significantly.
- It is normal to have some local irritations especially at the beginning of the treatment such as redness and itching. In this case, you have to avoid and stop using the night treatment especially the activator solution on these areas for a few days until its complete healing.
